Symbol-Assisted Story

Safe Practices - Social Distancing

Social Distancing

Coronavirus

can

spread

if someone

coughs,

sneezes

or

talks

and is

standing

too

close to

other

people.

It spreads through tiny drops of saliva that come out of our mouth

when we sneeze, cough and talk. These drops are so small we

cannot see them, but they can carry the virus.

Social distancing

stops

Coronavirus

spreading

because these

drops

cannot

reach

us.

Social distancing means:

1. Walk and stand away from other people.

2. Avoid handshakes, high fives and hugs.

3. Give people personal space. 2 metres is good.

People

can now

chose

when to

social distance.

By

choosing

to

social distance

we are

helping

to

stop

Coronavirus

spreading.

We can

choose

to

social distance

when we are

near

people

we

do not

live

with.

Social distancing

will

help

stop

Coronavirus

from

spreading.

Thank you

for

helping

stop

Coronavirus.
